WHAT IS CLAIMED IS:

- A method of fabricating insulation, comprising
 needling polybenzazole (PBZ) fibers into a first felt layer, such felt having an
 outer mold line (OML) surface and an inner mold line (IML) surface;
- affixing a layer of fabric comprised of ceramic fibers to the OML surface of the felt; and

applying a ceramic coating to the fibers of the fabric layer.

- 2. The method of claim 1, further comprising
 needling poly(1,3-phenylene isophtalamide) fibers into a second felt layer, and
 needling the second felt layer to the IML surface of the first felt.
- 3. The method of claim 1, wherein the fabric is affixed to the OML of the first felt layer by needling the felt to the fabric, thereby entangling fibers of the felt with fibers of the fabric.
 - 4. The method of claim 1, wherein the ceramic coating is applied to the fabric prior to affixing the fabric to the first felt layer.
- 5. The method of claim 1, wherein the ceramic coating is applied to the fabric subsequent to affixing the fabric to the first felt layer.
